AI SEO Blog Strategy for a Niche Website

Capstone 29 | AI Skills Course, Topics 1-10

Niche: Free AI tools for college students

Project question: Can AI help plan keyword-driven blog content without producing low-quality or copied text?

Tools used: ChatGPT (free), Gemini (free), Grammarly (free), Canva (free), Duplichecker (free), Google Sheets, Google autocomplete

Contents

1. Keyword plan
2. 10 blog topics
3. Article 1
4. Article 2
5. Featured images
6. Plagiarism and readability report
7. Outline generator template (Google Sheet)
8. Quality comparison: AI-assisted vs unassisted
9. Prompt library
10. Responsible AI note

AI skills used

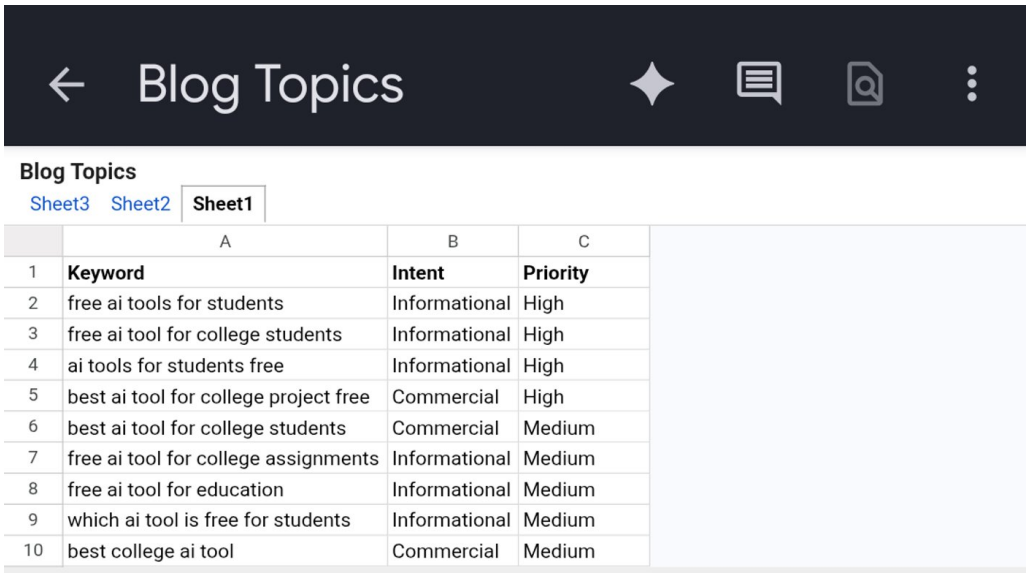

Prompt engineering, content writing, research and verification, image generation, automation (Google Sheets outline generator) and responsible AI (6 skills from Topics 1-9).

1. Keyword Plan

Method: I typed the seed phrase 'free ai tool for college students' into the browser search bar and noted the autocomplete suggestions. 'free ai tools for schools' was removed because it targets school students, not college students. Each keyword was given an intent and a priority in Google Sheets, in the Sheet1 tab (Screenshot 1): 'best' keywords show comparison intent, and broad 'free ai tools for students' phrases get High priority.

#	Keyword	Intent	Priority
1	free ai tools for students	Informational	High
2	free ai tool for college students	Informational	High
3	ai tools for students free	Informational	High
4	best ai tool for college project free	Commercial	High
5	best ai tool for college students	Commercial	Medium
6	free ai tool for college assignments	Informational	Medium
7	free ai tool for education	Informational	Medium
8	which ai tool is free for students	Informational	Medium
9	best college ai tool	Commercial	Medium

	A	B	C
1	**Keyword**	**Intent**	**Priority**
2	free ai tools for students	Informational	High
3	free ai tool for college students	Informational	High
4	ai tools for students free	Informational	High
5	best ai tool for college project free	Commercial	High
6	best ai tool for college students	Commercial	Medium
7	free ai tool for college assignments	Informational	Medium
8	free ai tool for education	Informational	Medium
9	which ai tool is free for students	Informational	Medium
10	best college ai tool	Commercial	Medium

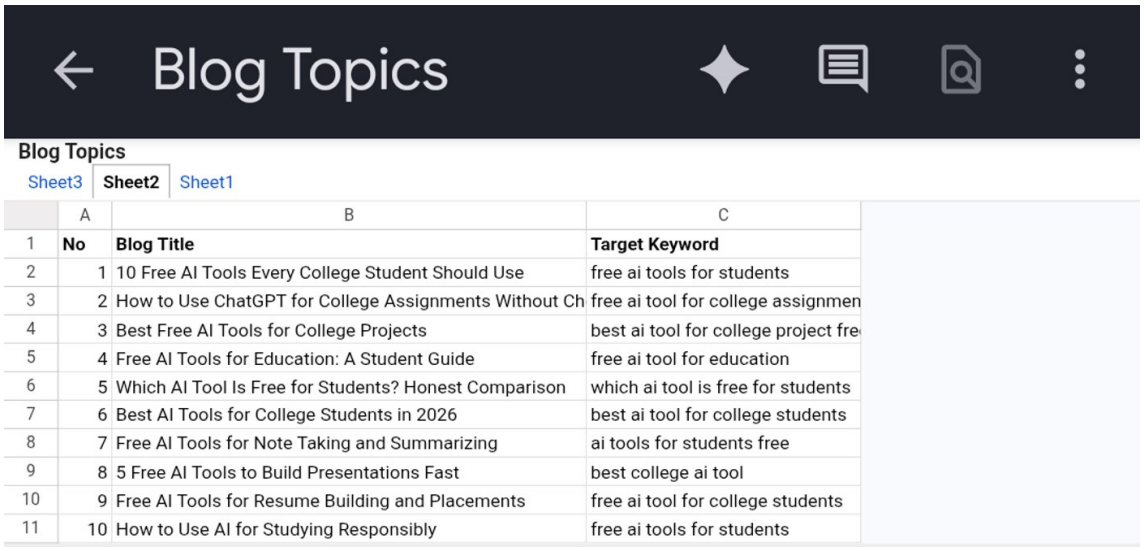

Sheet1: keyword plan with intent and priority for 9 keywords.

2. Ten Blog Topics

Each topic targets one keyword from the plan. Titles were generated with ChatGPT and listed in the Sheet2 tab of the same Google Sheet (Screenshot 2). Topics 1 and 2 were written in full as the two articles. The final title of Article 1 was edited while writing to: **10 Free AI Tools I'd Recommend to Any College Student**.

#	Blog title	Target keyword
1	10 Free AI Tools Every College Student Should Use **(Article 1)**	free ai tools for students
2	How to Use ChatGPT for College Assignments Without Cheating **(Article 2)**	free ai tool for college assignments
3	Best Free AI Tools for College Projects	best ai tool for college project free
4	Free AI Tools for Education: A Student Guide	free ai tool for education
5	Which AI Tool Is Free for Students? Honest Comparison	which ai tool is free for students
6	Best AI Tools for College Students in 2026	best ai tool for college students
7	Free AI Tools for Note Taking and Summarizing	ai tools for students free
8	5 Free AI Tools to Build Presentations Fast	best college ai tool

Sheet2: ten blog titles with target keywords.

3. Article 1

10 Free AI Tools I'd Recommend to Any College Student

Target keyword: free ai tools for students | Words: 419

Introduction

Most students already know AI can write essays. The better use is as a study partner that explains, quizzes, and organises while you do the thinking. These ten tools have free plans that cover most college work.

1. ChatGPT

Paste a topic you don't understand and ask it to explain like you're new to the subject, then ask for five practice questions. The catch: it can state wrong facts confidently, so check anything you plan to submit.

2. Google Gemini

Useful when you have a pile of scattered notes. Ask it to group them into a project outline or a slide-by-slide plan.

3. Grammarly

The free plan catches spelling, grammar, and punctuation mistakes as you type, which is handy for emails to professors. Plagiarism checking and full rewrites are paid features, so don't count on them.

4. Canva

Pick a free poster or presentation template and swap in your content. Some AI design features are included free, though the best ones sit behind a paywall.

5. NotebookLM

Upload your own PDFs or notes and ask questions about only that material. It can also turn them into a podcast-style audio summary, which is good for revising while travelling.

6. Perplexity

It answers a question and shows the sources next to the answer, so you can open them and check. Because every answer comes with links, it is easier to find sources for an assignment.

7. QuillBot

Paste a sentence that sounds awkward and compare the reworded versions. The free plan limits how much text you can process at once. Use it to improve your own writing, never to disguise copied text.

8. Google Docs

Real-time sharing, comments, and version history make group assignments easier. You can see who changed what and roll back mistakes.

9. Microsoft Copilot

Built into Windows and Edge, so it's one click away while you browse. Good for quick brainstorming and first drafts you then rewrite yourself.

10. Elicit

Type a research question and it finds relevant academic papers and summarises their findings. The free plan has usage limits, so save it for serious research.

What Students Gain

• Faster note preparation

• Clearer understanding of hard concepts

• Cleaner writing

• Better-organised projects and presentations

Using AI Honestly

Check every fact, never paste personal data into a tool, and follow your college's AI policy. If your college doesn't allow AI-written work, don't submit it as your own.

Conclusion

The best tool is the one that fits the task: explaining, researching, writing, or designing. Use AI to support your thinking, not replace it.

4. Article 2

How to Use ChatGPT for College Assignments Without Cheating

Target keyword: free ai tool for college assignments | Words: 433

Introduction

Using ChatGPT for college work is not automatically cheating. What matters is who does the thinking. When the tool explains a concept and you write the answer in your own words, you are learning. If you paste its output into your assignment and submit it, you are not. This guide shows how to stay on the right side of that line while still using a free AI tool for college assignments.

1. Check your college's rules first

Policies differ between colleges and even between teachers. A few permit AI for ideas only, not for the final draft. Others ask you to declare any AI use. Read the guidelines in your syllabus, and if nothing is written, ask your teacher before you start.

2. Learn with it instead of copying from it

When a topic confuses you, ask ChatGPT to explain it in simple words or with an everyday example. Then close the chat and explain it back from memory. If that feels hard, revise the topic once more.

3. Plan with it, then write alone

Ask for help building an outline or listing questions your assignment should answer. Decide which points to keep, then write every sentence yourself. The structure can be shared, but the writing must be yours.

4. Test yourself

Ask it to quiz you with practice questions on a chapter. Answer first, then check. This turns the tool into a revision partner and teaches you more than reading a ready-made summary.

5. Never trust facts blindly

ChatGPT can invent statistics, book titles, and sources that sound real. Check every fact in your textbook or a reliable website, and never copy a reference you have not opened yourself.

6. Run your own work through checks

After writing, use a spelling and grammar checker, then a plagiarism checker. If a sentence is flagged, rewrite it in your own words instead of swapping a few terms.

7. Be open about it

If your college asks for a declaration, write one line such as: I used ChatGPT to explain concepts and plan my outline, and I wrote the final text myself. Honesty protects you if questions come up later.

Quick checklist

Before you submit, ask yourself:

• Could I explain this answer to someone without looking at the chat?

• Did I check every fact and source?

- Does my college allow this kind of AI help?
- Is the final wording my own?

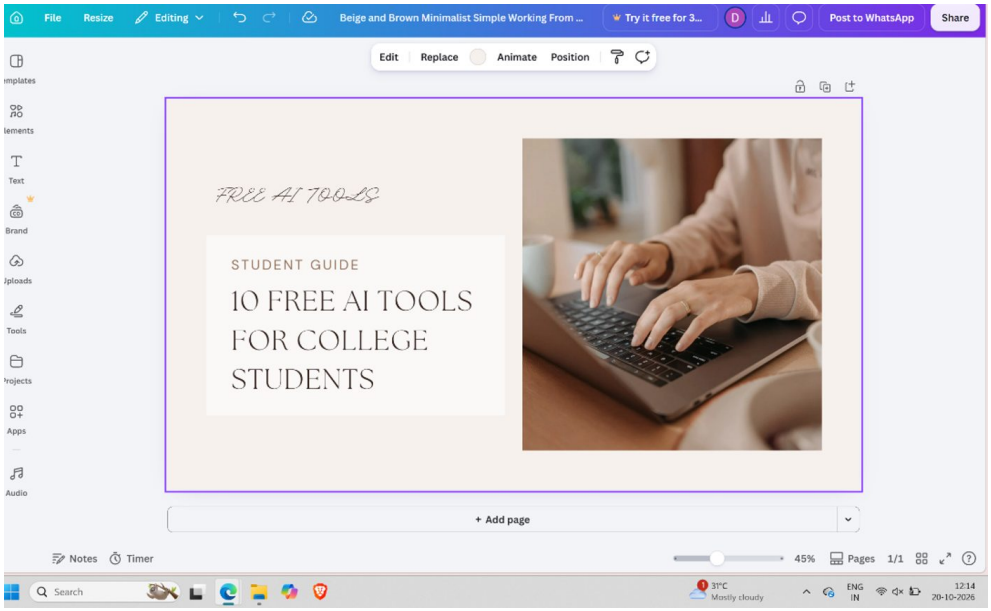

Conclusion

ChatGPT works best as a tutor, not a ghostwriter. Use it to learn faster, plan better, and practise more, but keep the final work in your own voice. That is how you get the benefit without the risk.

5. Featured Images

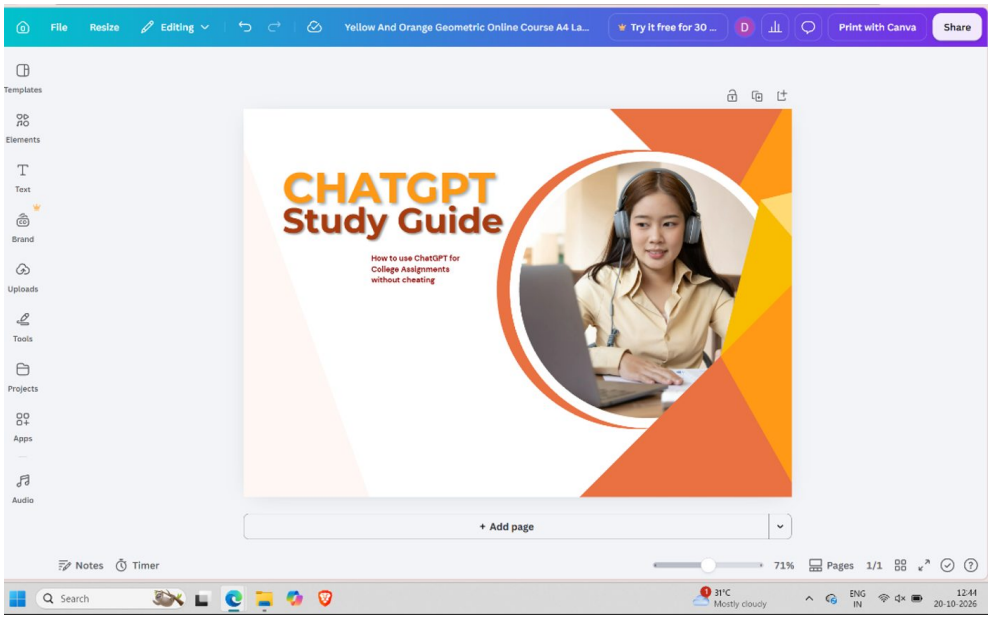

Both featured images were designed in Canva (free plan).

Featured image for Article 1

Canva design: '10 Free AI Tools for College Students'.

Featured image for Article 2

Canva design: 'ChatGPT Study Guide - How to use ChatGPT for College Assignments without cheating'.

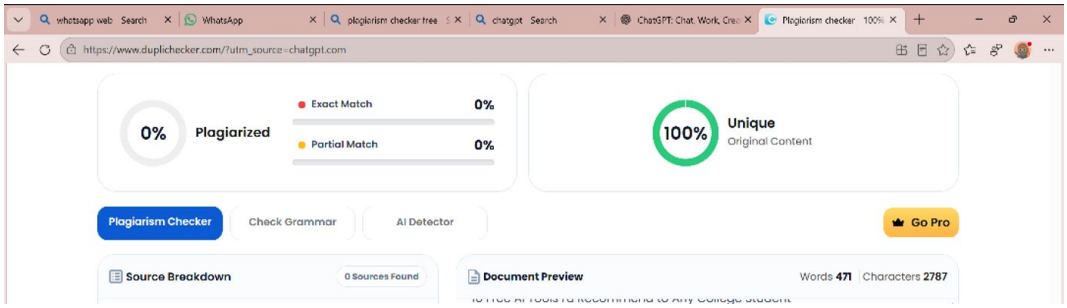

6. Plagiarism and Readability Report

Plagiarism was checked with Duplichecker (free version), and writing quality with Grammarly (free). Flesch Reading Ease was calculated with a simple formula (higher is easier; 60-70 is plain English). Word counts from the checker are slightly higher because the title and headings were included.

Article	Words (checker)	Flesch Reading Ease	Plagiarism result	Grammarly score
Article 1	471	67.2	0% plagiarized, 100% unique, 0 sources found	98 / 100
Article 2	464	76.5	3% plagiarized (exact match), 97% unique, 1 source flagged	96 / 100

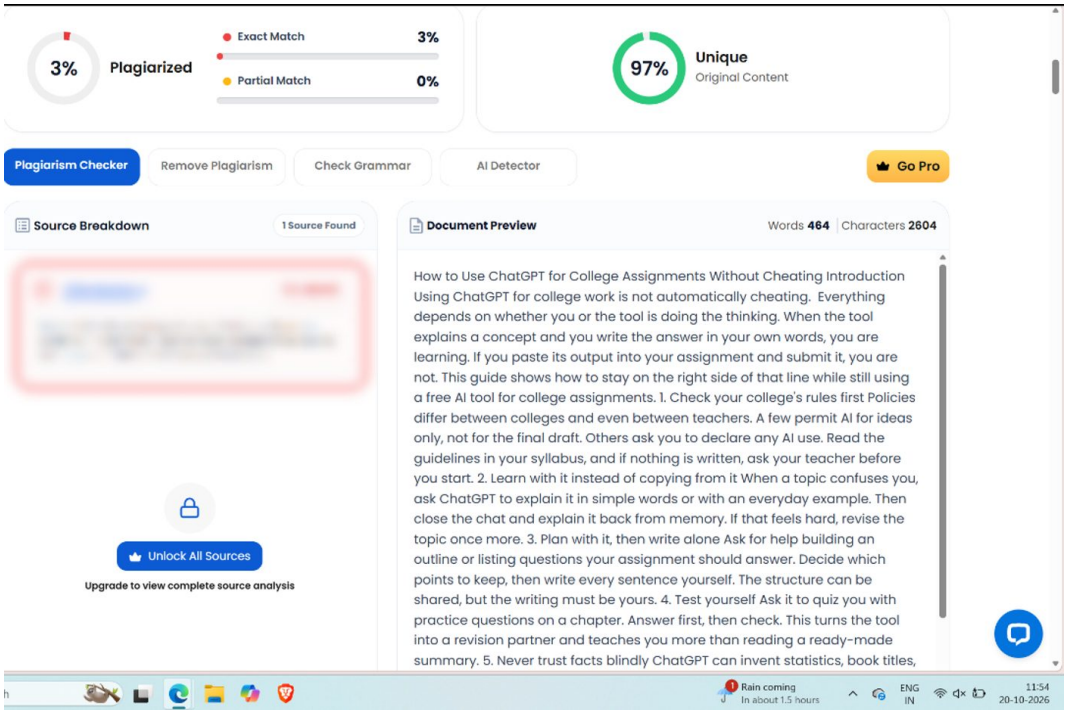

Note on Article 2: The free version of the checker hides the source details for the 3% match, so the matched text could not be viewed. A small match is common for short stock phrases in guides like this. The screenshots show the text as it was at the time of checking; the final articles were lightly edited afterwards.

Screenshot 3: Plagiarism result, Article 1

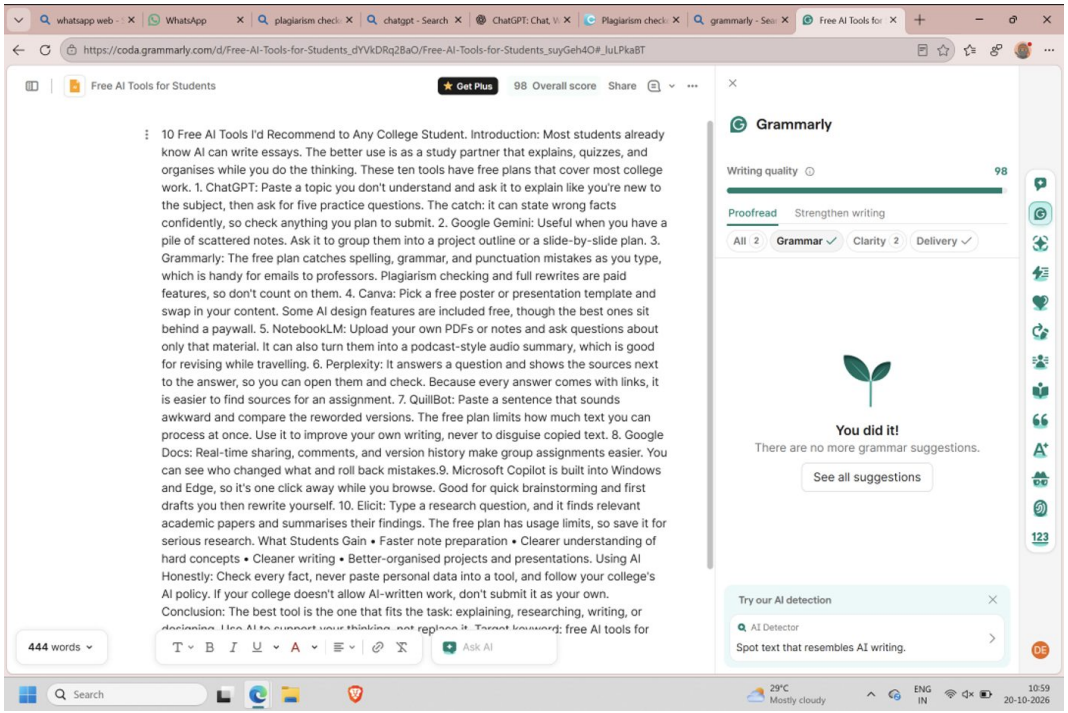

Duplichecker: 0% plagiarized, 100% unique (471 words).

Screenshot 4: Plagiarism result, Article 2

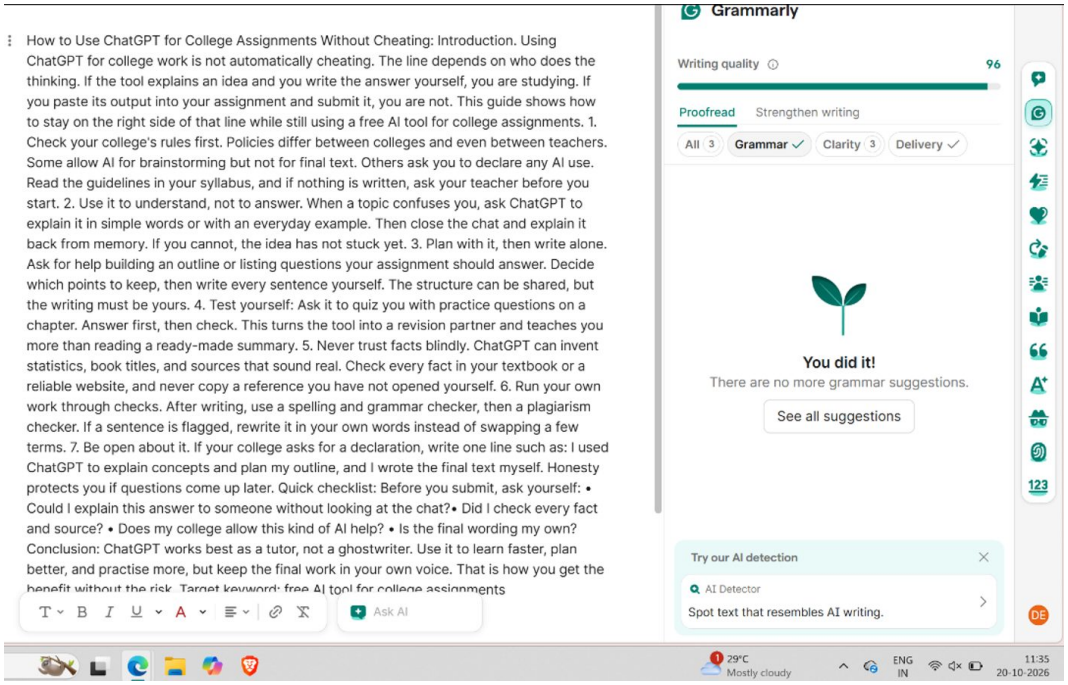

Duplichecker: 3% exact match, 97% unique (464 words).

Screenshot 5: Grammarly, Article 1

Writing quality score 98.

Screenshot 6: Grammarly, Article 2

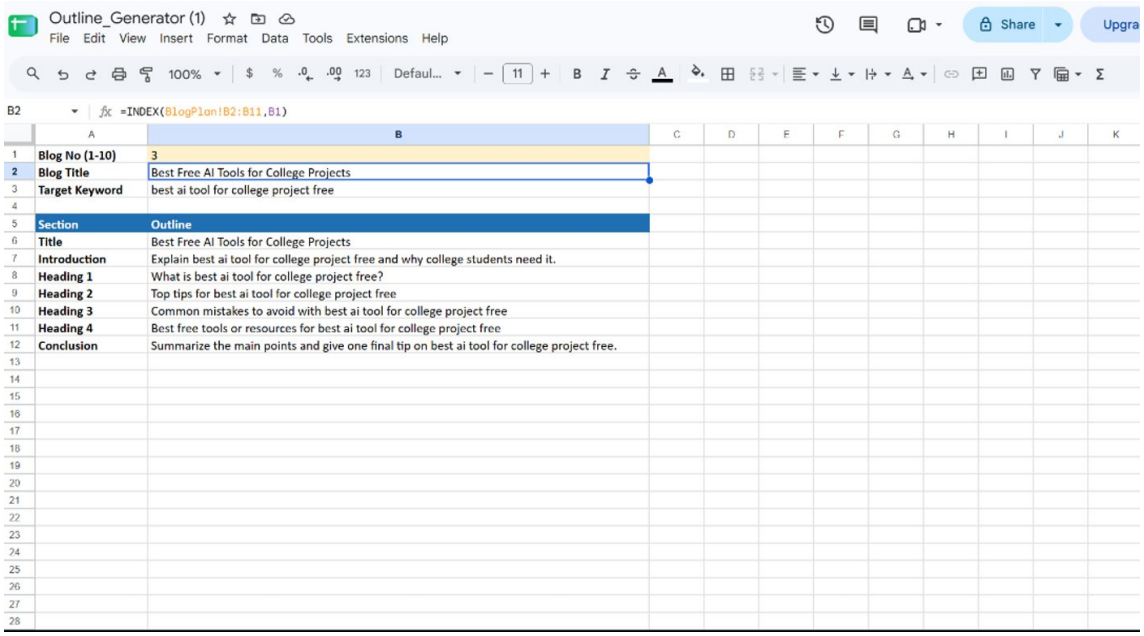

Writing quality score 96.

7. Outline Generator Template (Google Sheet)

The 'Outline Generator' sheet builds an outline automatically from the 'BlogPlan' tab. The user types a blog number (1-10) in cell B1. The title and target keyword are then pulled by a formula, for example `=INDEX(BlogPlan!B2:B11,B1)`, and the outline rows (Title, Introduction, Heading 1-4, Conclusion) are filled using the keyword. The outline can then be copied into ChatGPT or Gemini to write the full article.

Cell / Rows	Content
B1	Blog number (1-10), chosen by the user
B2	Blog title, pulled with INDEX from the BlogPlan tab
B3	Target keyword, pulled with INDEX
Rows 6-12	Section (Title, Introduction, Heading 1-4, Conclusion) and the outline text for that blog

Screenshot 7: Outline Generator (Blog 3 selected)

Blog 3 selected: 'Best Free AI Tools for College Projects'. Changing the blog number in B1 updates the whole outline.

8. Quality Comparison: AI-assisted vs Unassisted

Task: Write a 150-word introduction on 'Why students should use AI tools'. One version is written with AI help, and one without any AI.

Criteria	AI-assisted	Unassisted
Time taken	about 5 min (prompt, edit, check)	30 min
Flesch reading ease	49.8	77.5
Plagiarism %	9% (1 sentence matched)	8% (1 common phrase matched)
Originality / personal voice	Medium; improves after adding own examples	High; my own examples and voice
Depth and facts	Good structure; facts must be verified	Basic; few facts, simple points
Grammar errors	Very few	Several minor (about 10)
SEO structure	Strong	Weak; no headings or keyword
Overall rating (out of 10)	6	7.5

Conclusion: AI saved time (about 5 min against 30 min) and gave a clear structure, but its text was harder to read (Flesch 49.8 against 77.5) and sounded generic. My own text had personal examples and was easier to read, but it had small grammar mistakes and weak SEO structure. The best approach is to use AI for structure, then edit for voice and accuracy, and run a plagiarism check before publishing.

9. Prompt Library

#	Purpose	Prompt	Tool
1	Keywords	Give me 15 more long-tail SEO keywords for 'free AI tools for college students', with search intent.	ChatGPT
2	Clustering	Group these keywords into topic clusters and suggest one pillar post per cluster: [paste keywords]	Gemini
3	Topic titles	Create 10 blog titles from these keywords. Under 60 characters, click-worthy but not clickbait.	ChatGPT
4	Outline	Write a detailed outline for the blog title '[title]' with H2/H3 headings and an FAQ.	ChatGPT
5	Draft	Write a 500-word article following this outline. Simple English, short paragraphs, no made-up statistics.	ChatGPT
6	Humanise	Rewrite this paragraph in a more personal tone with a real student example: [paste]	Gemini
7	Fact check	List every factual claim in this article and tell me which I should verify with a reliable source.	Gemini
8	Meta description	Write a meta description under 155 characters for this article, including the keyword '[keyword]'.	ChatGPT
9	Image idea	Suggest a featured image concept and Canva layout for the article '[title]'.	ChatGPT
10	Outline template	Write a blog outline for the keyword '[keyword]'. Include a title, intro, 5 H2 headings, FAQ and conclusion.	Google Sheets + ChatGPT

10. Responsible AI Note

AI was used to brainstorm keywords, suggest titles and draft the articles. The drafts were then reviewed for accuracy and tone, checked for plagiarism and readability, and tool details were verified on each tool's website, since free plan limits change often. No text was copied from other websites. AI use is disclosed in this report.
